New Features

- We have added a backup and recovery solution
- We have added My Folder and Shared Folder support to Edit ad Scout Station

Updates

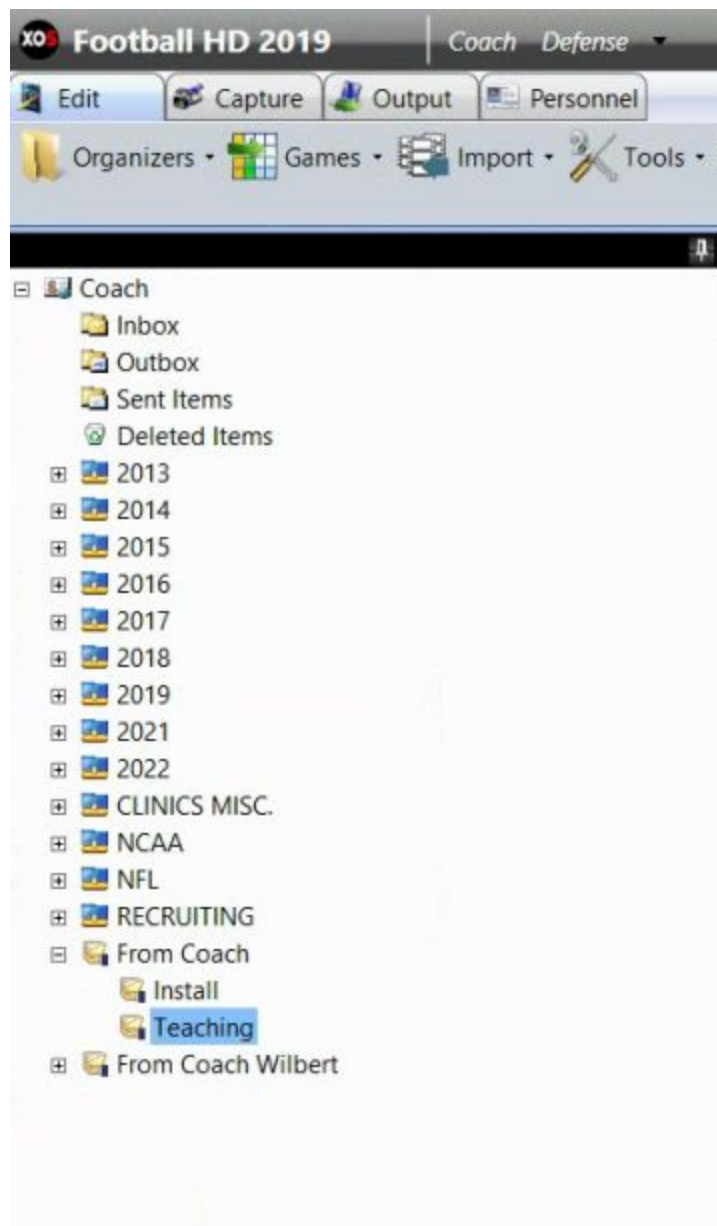

- Supportability Improvements
- TLS 1.2 Support
- Add team code validation for PFF Import
- Created a folder selection tool to manage backup solution
- Adjusted the DB autogrowth size to 512 MB
- Report Merge Count to Eagle Eye so that there can be better management regarding publication resets
- Updated Restricted User Setup Tool
 - Update Firewall and Network Settings
 - Add State Permission
- Added error reporting for 'Previous' Field calculations
- API Updates
 - Search for plays based on Game Properties
 - User can specify season when searching
 - User can update plays with media searched by GSIS ID, PFF PlayID, XOS Play ID, Game Key and Scouted Team

Known Issues

- Thunder crashes if Transcode Queue Tool is closed during an auto refresh
- Drilling down on a value in a Game Analysis to run sub report throws an error

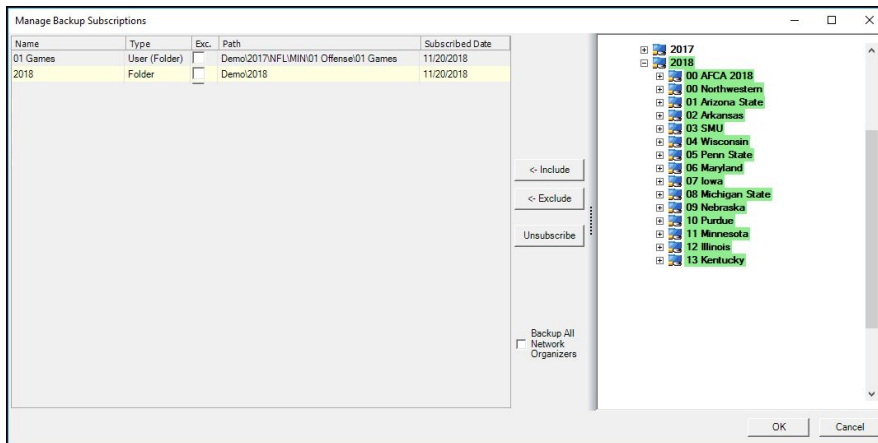

My Folders and Shared to Me available in Edit and Scout Station by default

- Users no longer have to select the option to see their My Folders

Backup and Recovery Solution- Add On Product*

- Securely mirror your Thunder database to a server on or off site.
- Automated backup all of your media.
- Easily switchover to your backup servers.
- A mirror of your database is created on a backup server. You then choose if some or all of your media will be backed up. Custom Thunder services automate the backup process and ensure that all of your critical media is backed up.
- In case of main server failure, quickly switchover your clients through the Exchange Agent.
